

Reliability is our specialty

Innovation is our tradition, and we've been leading the way in entertainment technology for 30 years.

We understand the importance of customer satisfaction to your business—because it's critical to ours. That's why we build our commercial-grade dishes to be **3X more powerful than residential dishes**, and use materials that can withstand any climate, in any city, at any time.

We hold our service to the highest possible standards—and it shows:

99%

Signal reliability, based on a nationwide study of our customers*

100%

Nationwide coverage

24/7

Remote monitoring and **24/7 support**

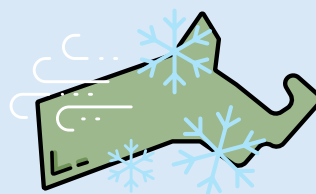

Signal that can stand up to the storm

In regions with severe weather, durability is important.

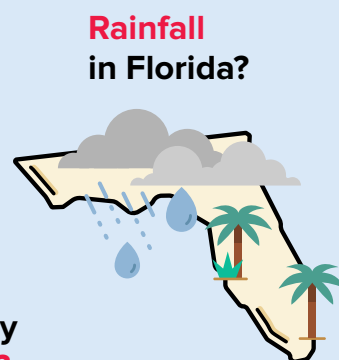

As a Colorado-based company, we're familiar with weather woes. That's why, for all our customers, our partners conduct **comprehensive** site surveys to assess factors like climate, cabling needs, and spatial constraints.

As a result, we're able to understand—and customize—your installation to your specific environmental needs.

Your business doesn't stop for snow days, rain delays, or wind warnings. As your technology partner, we won't either.

Blizzard
in Boston?

Rainfall
in Florida?

Surrounded by
sequoia trees?

Windstorm
in Wichita?

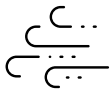

We've got you covered.

Built for any weather, anywhere

Snow day? No problem.

In some cases, heaters can be added to dishes to keep them snow and ice-free. The heaters are temperature-activated, turning on automatically in case of severe snow. While this is a great backup, it's not always needed. Even with 57" of snowfall a year on average, the DISH corporate office in Denver doesn't require a heater.

Reliability is a breeze

DISH Business commercial dishes are manufactured from thermosets—incredibly strong composites widely used in modern aerospace applications like commercial airplanes. Believe us, it gets a little windy at 30,000 feet.

Our commercial dishes are rigorously tested to ensure performance through up to 80 mph winds—or the equivalent of a Category 1 hurricane. Whether on the plains or coasts, our dishes are tough enough to weather the storm in America's windiest cities.

If a tree falls in the woods...

..our technicians are already on it.

DISH Business is one of the only providers with **100% coverage** serving all U.S. communities, including rural and mountainous regions. Our partners' comprehensive site surveying process ensures that equipment is installed at the optimal location and angle to avoid interference from nearby trees, buildings, and landforms.

“Nationwide” means we work wherever you do

DISH Business serves all 50 states—no matter what the climate may be. From the Windy City to the Sunshine State and everywhere in between, DISH Business is your trusted partner in high quality, reliable entertainment technology.
